

BuddyU- Team 84

Key achievements in the last week

- The major achievements made in the last week really are key in the completion of our promised app.
- Filter added to the classes screen where when a keyword is typed, classes listing that keyword will appear on screen for easier navigation.
- Worked more on the user manual.

Key planned activities for the next week

- We have four user inputs for the previous version of BuddyU and now our key goal is to get new users, almost 10-15 to review and give feedback for the new version of our app
- We also have to work on creating our final presentation and making it detailed and as per the rubric
- We need to also review the user inputs and see if we can fix any last minute fragments in our app
- We also need to finish up our system manual
- We are still working on further developing the profile screen to include elements such as Name, Class Standing, and Major. However, if we might need to move it to a later scope if we realize we cannot complete it.

Plan to keep/get project to Green status

- The plan is to finish up the system manual with elaborate communication
- Also user testing before creating the final presentation would be needed
- Final presentation should be divided up into sections and should be organized for the instructor.

Key risks / issues / scope changes

- We have decided to discontinue working on the chat and make it a scope deliverable of the future.
- Risks could be not being able to find the right amount of people to give good reviews for user testing.
- Our calendar screen has also been discontinued. Instead we are now using the schedule screen which a user can view their schedule as well as other users.
