BuddyU App-Team 84

Key achievements in the last week

- From the previous week, we were able to make a couple of key changes that will impact the making of our schedule.
- The first part was selecting the classes. Previously in the classes option, when we listed all the classes we were only able to select the desired classes.
- Now, we are able to select those desired classes and when we click on the schedule screen in the sidebar, the CRN numbers of those selected classes will be listed on the schedule screen.
- Also, for the buddies screen, in the beginning, we were able to select buddies in the add buddies screen, but once we clicked out of the screen, it got unselected.
- Now we are able to select buddies and once they are selected they are equivalent to being your buddies.
- We also created a user testing survey for data generation.

Key planned activities for the next week

- The major planned activities for next week are the advancement of the schedule screen.
- Since our integration testing worked out pretty well, the next job is to list the CRN numbers with the actual classes that they come with.
- We are working on the creation of the schedule in a weekly form which will be able to list what classes will be on what day in a week according to the TMS information. The next step in the project would be able to make sure that there are no time conflicts with the classes someone adds to their schedule.
- Also, since the survey is complete and once some features are some developed, we want to get at least 20 users to test the app and give their opinions on it.

Plan to keep/get project to Green status

- The plan to keep this project on green status is knowing what we have to do and preventing issues from coming up. We need good time management to keep at least two user testing sessions which can update us on the progression of our app in terms of user usability and likability.

Key risks / issues / scope changes

- Major risks are time management through the weeks because we still want to do a lot of things for our app, but we think we wont have enough time in this academic quarter to complete what we want to.
- This includes our progress on developing the chat feature, which is a little slow, but we still will be able to deliver it on time, just probably not for user testing.
